MAP History

Preparation Phase

Experimental Phase, 1999 SOP 1st WWRP RDP

Analysis Phase

Demonstration Phase

MAP Forecast Demonstration Project

2nd WWRP FDP

MAP - 1. Preparation Phase

Supported by the World Weather Research Program (WWRP)

MAP

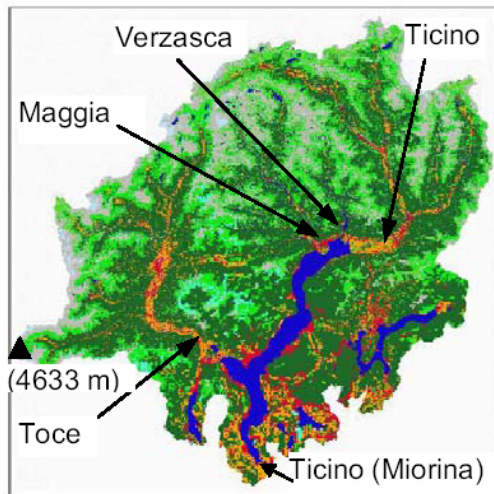

-> study of atmospheric and hydrological processes over mountainous regions.

MAP surface hydrology

- > orographically-influenced precipitation
- > related flooding episodes
- > NWP improvement within complex topography
- > interactions with land-surface processes

2. Experimental Phase, 1999 SOP

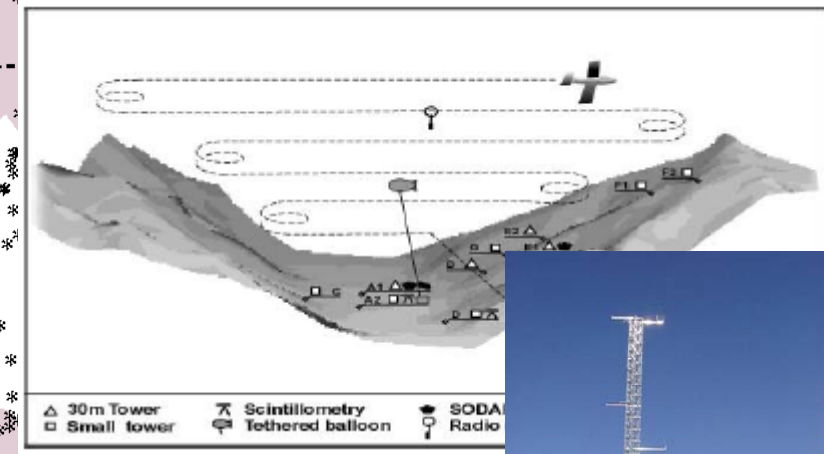

Lago Maggiore - Lake Level 1999

MAP-SOP

Bacchi & Ranzi, HESS (2003)

2. Experimental Phase, 1999 SOP

- △ 30m Tower
- Small tower
- ✕ Scintillometry
- ⊕ Tethered balloon
- ⊙ SODA
- ⊙ Radio

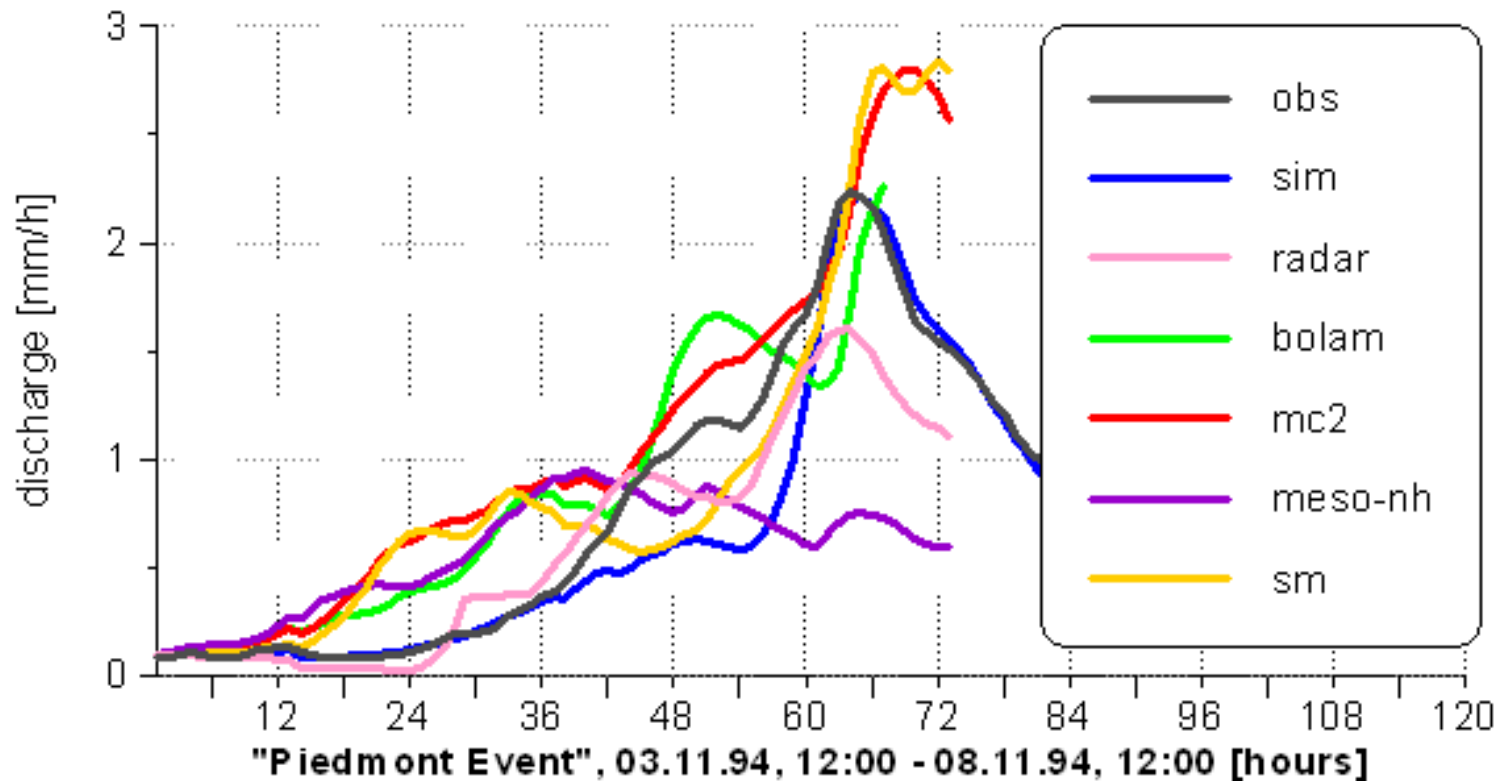

Lago Maggiore - Real-time Forecasting

MC2 <-> WATFLOOD

Streamflow (in $m^3 s^{-1}$) for the period of Sep. 4 to Nov. 17, 1999,

Simulation Results for the Piedmont-Flood 1994 Forecast Mode

The RAPHAEL* Project

*Runoff and Atmospheric Processes

for flood HAZARD forecasting and control

MAP - 3. Analysis Phase

- operational use of a high-resolution numerical models
- mechanisms of orographic precipitation
- alpine radar composite
- new terrain-following coordinate for steep orography
- progress in hydrological modelling and associated near-surface exchange processes

Publications database <http://www.map.meteoswiss.ch/>

MAP-DPHASE

Demonstration of Probabilistic Hydrological and Atmospheric Simulation of flood Events in the Alps.

- Demonstrate ability for improved forecast of heavy precipitation in the alps
 - High-resolution atmospheric modelling
 - ensemble forecast technique
 - Radar data (assimilation)
 - Hydrological modeling
- End users involved (end user needs, e.g. probabilistic forecasts): **end-to-end forecast system**

MAP - 4. Demonstration Phase

Quasi-operational forecasting system for Alpine flood events

- **EPS** with a lead time of a few days
- short-range forecasts based on **high-resolution atmospheric and hydrologic** models for selected regions or catchments (End-users)
- real-time **nowcasting** and high-resolution observational information (e.g. Radar)

Atmospheric models:

aLMo/2, AROME, MOLOCH, COSMO-LEPS, COAMPS, WRF, ALADIN-Austria, LMK, LAMI, Meso-NH, MM5, GEM-LAM, PEPS, LAMI-CNMCA, MOGREPS, ...

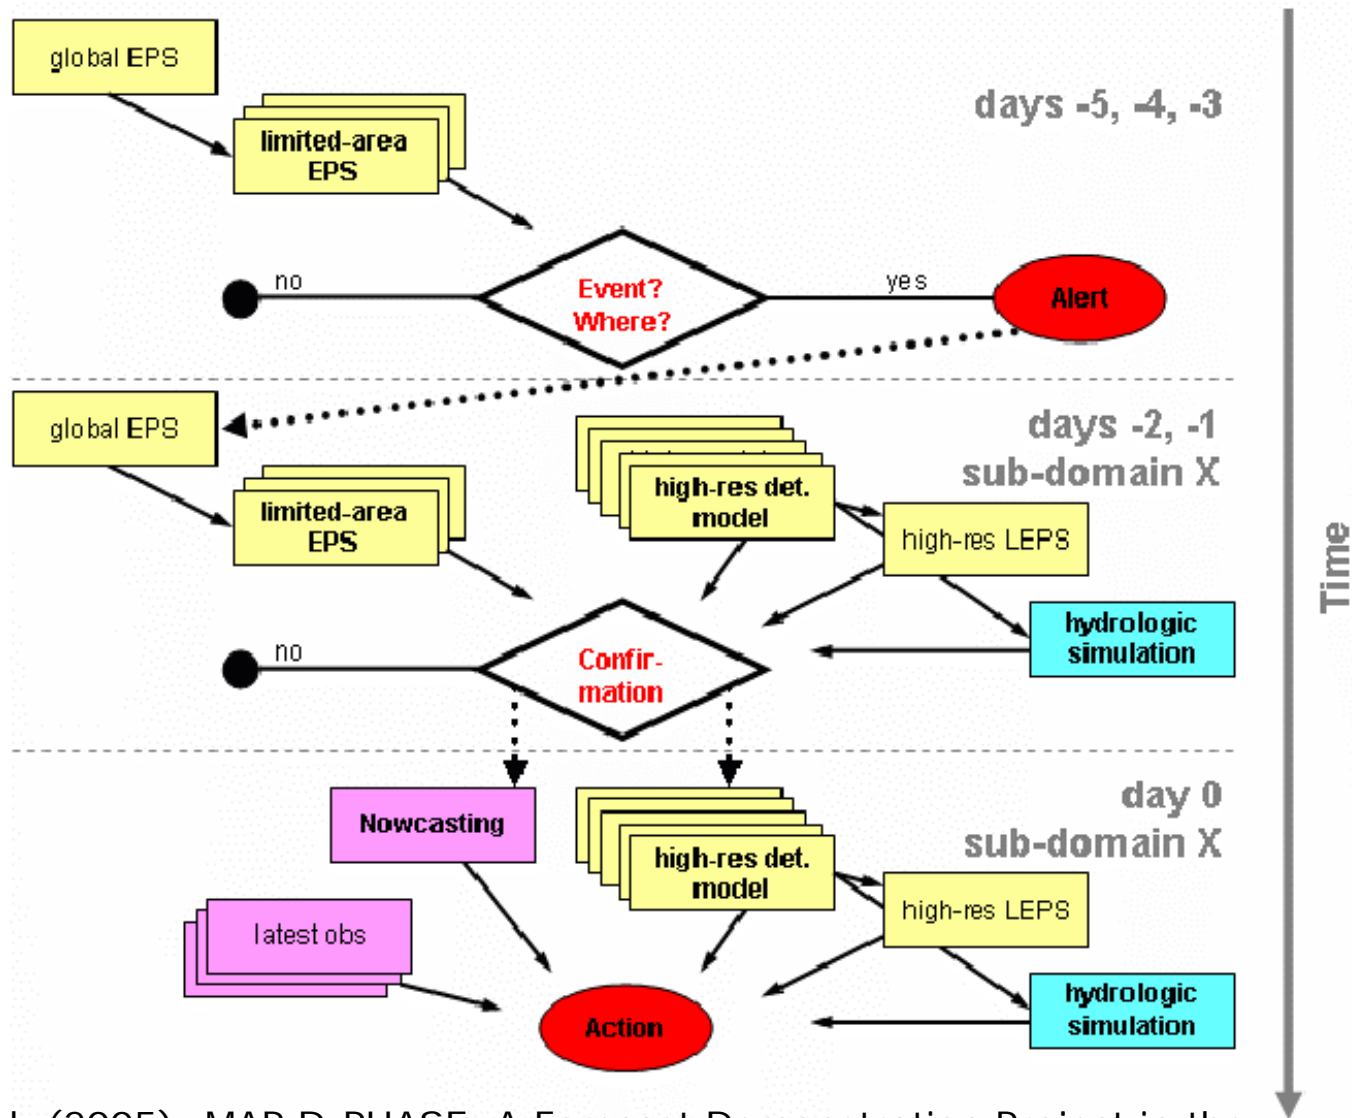

Hydrological models:

DRIFT, PREVAH, TopKapi, DIMOSOP, WATFLOOD ...

End users:

local authorities, lake regulators, institutional agencies... In various countries

MAP - 4. Demonstration Phase

Rotach M. et al. (2005): MAP D-PHASE, A Forecast Demonstration Project in the framework of MAP. - Unpublished project proposal to the WWRP-SSC.

WORKING GROUPS

- *Hydrology and End Users*

- different levels of (end)users, 'actors' or 'users'
- interface between the end users and modellers
- communication on state-of-the-art flood forecasting

- *Verification*

takes care of the evaluation protocols and is responsible for the validation and verification methodology to be adopted

- *Data Interface* - data collection, storage, and distribution

- *Data Policy* - legal matters related to data exchange

Issues

- *WWRP endorsement: Oct 2005*
- *International Steering Committee*
 - *all Alpine countries (and some more)*
 - *March 13/14: first meeting*
- *Project coordinator: Marco Arpagaus @MeteoSwiss*
- *Data Interface*
 - *joint data platform: co-financed with COPS*
 - *joint visualisation platform*
 - *joint warning and alert's platform: jointly with METEORISK*
- *Joint evaluation and verification protocols*
- *Demonstration period: June to Nov 2007*

COST Action 731

Propagation of Uncertainty in Advanced Meteo-Hydrological Forecast Systems

- European Concerted Research Action
- Forecasting (heavy) precipitation events
- Effects on corresponding hydrological processes
- Uncertainty prorogation in model chain
- Communication of uncertainty to the end-users

Working groups at the *interfaces*:

- observation and (atmospheric) modeling
 - atmospheric and hydrological modeling
 - hydrological modeling and end-users.
- > investigate the propagation of uncertainty through the various steps of modeling and decision making.

Confidence

Systematic treatment of uncertainty in a prediction chain

WG Structure: community interaction

- **WG-1:** Propagation of uncertainty from observing systems (radars) into NWP
- **WG-2:** Propagation of uncertainty from observing systems and NWP into hydrological models
- **WG-3:** Use of uncertainty in warnings and decision making

The **PROFIT** project

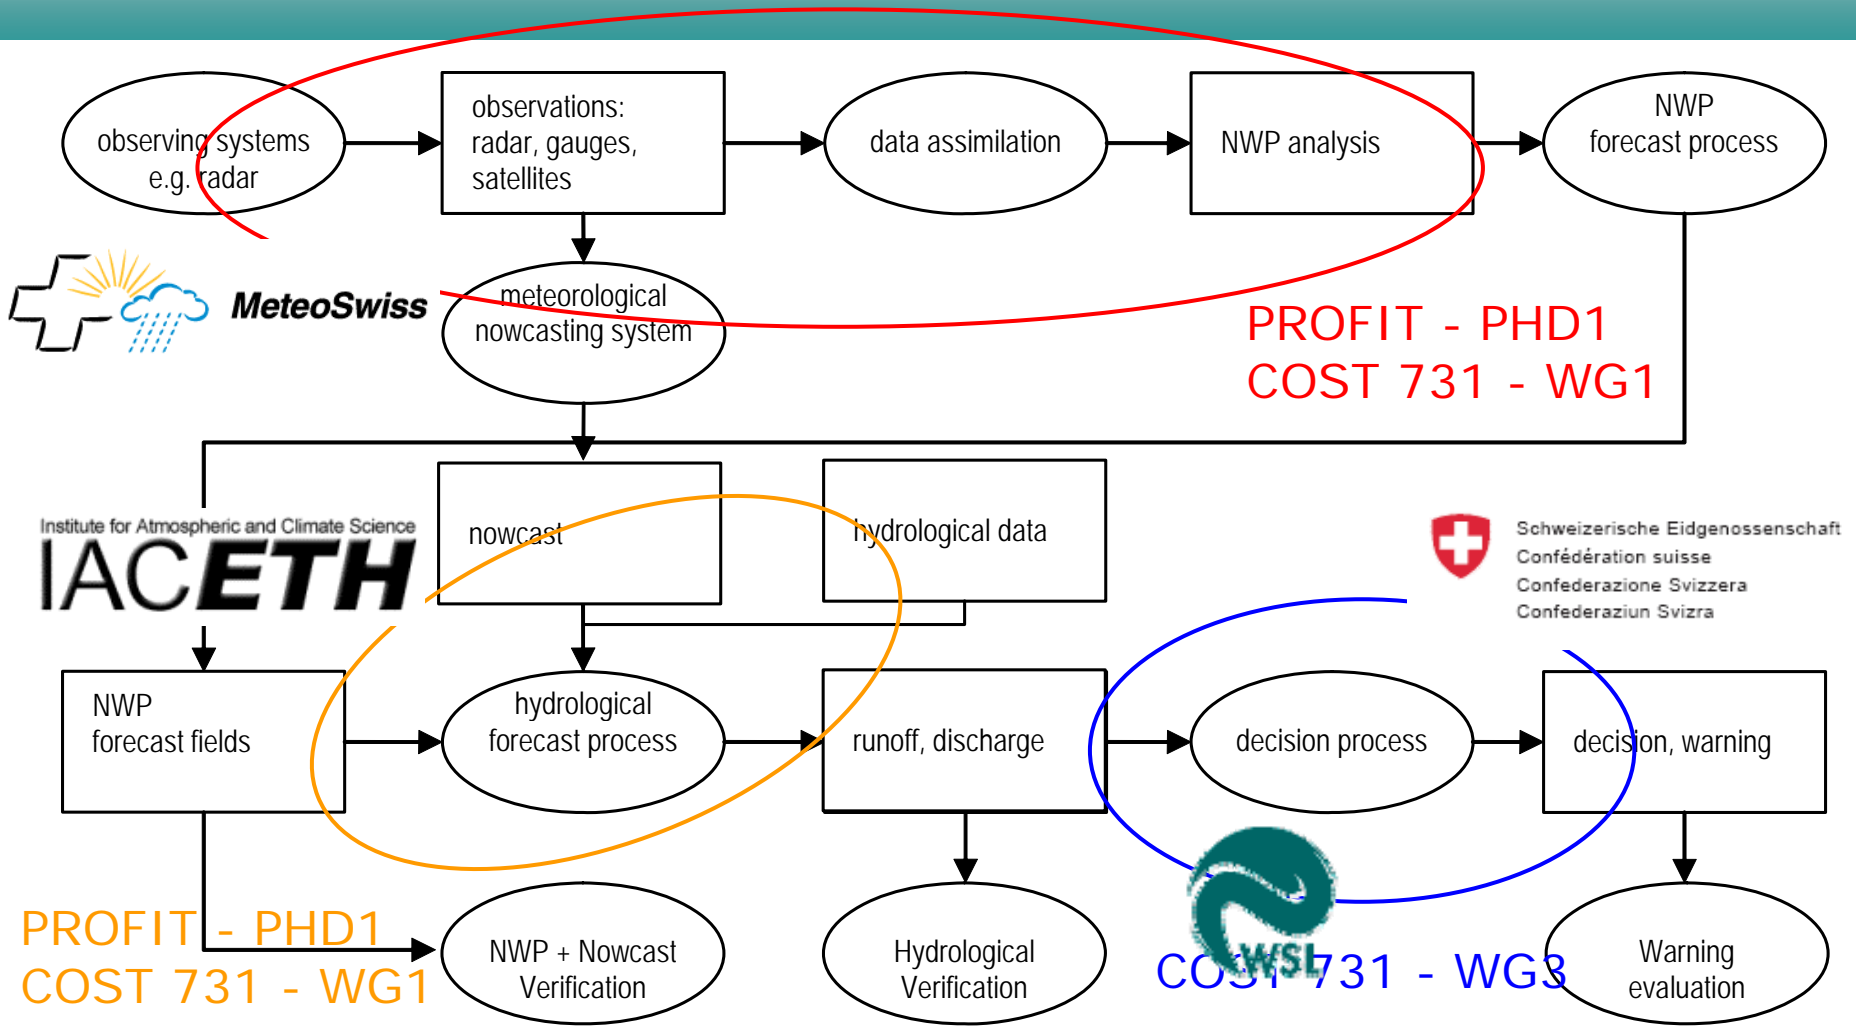

Probabilistic Forecasting Tools for Heavy Precipitation Events in the Alpine Region.

Focus on two specific steps of the forecasting chain:

- In a first PhD project high-quality radar data, NWP forecasts and other observational data will be employed to establish a heuristic probabilistic forecasting tool for the **nowcasting of orographic precipitation**
- A second PhD project concentrates on probabilistic forecasting of potential flood events through the use of a **hydrologic ensemble prediction system** (Talk by Mark Verbunt -> Operationalisation!)

COST 731 + PROFIT

Propagation of Uncertainty in Advanced Meteo-Hydrological Forecast Systems

Schematic to depict the production chain of a flood forecasting, decision making and warning system.

PROFIT areas

Main Target Area

Ticino - Miorina (6600 km²)

Rhine - Rhinefelden (34550 km²)

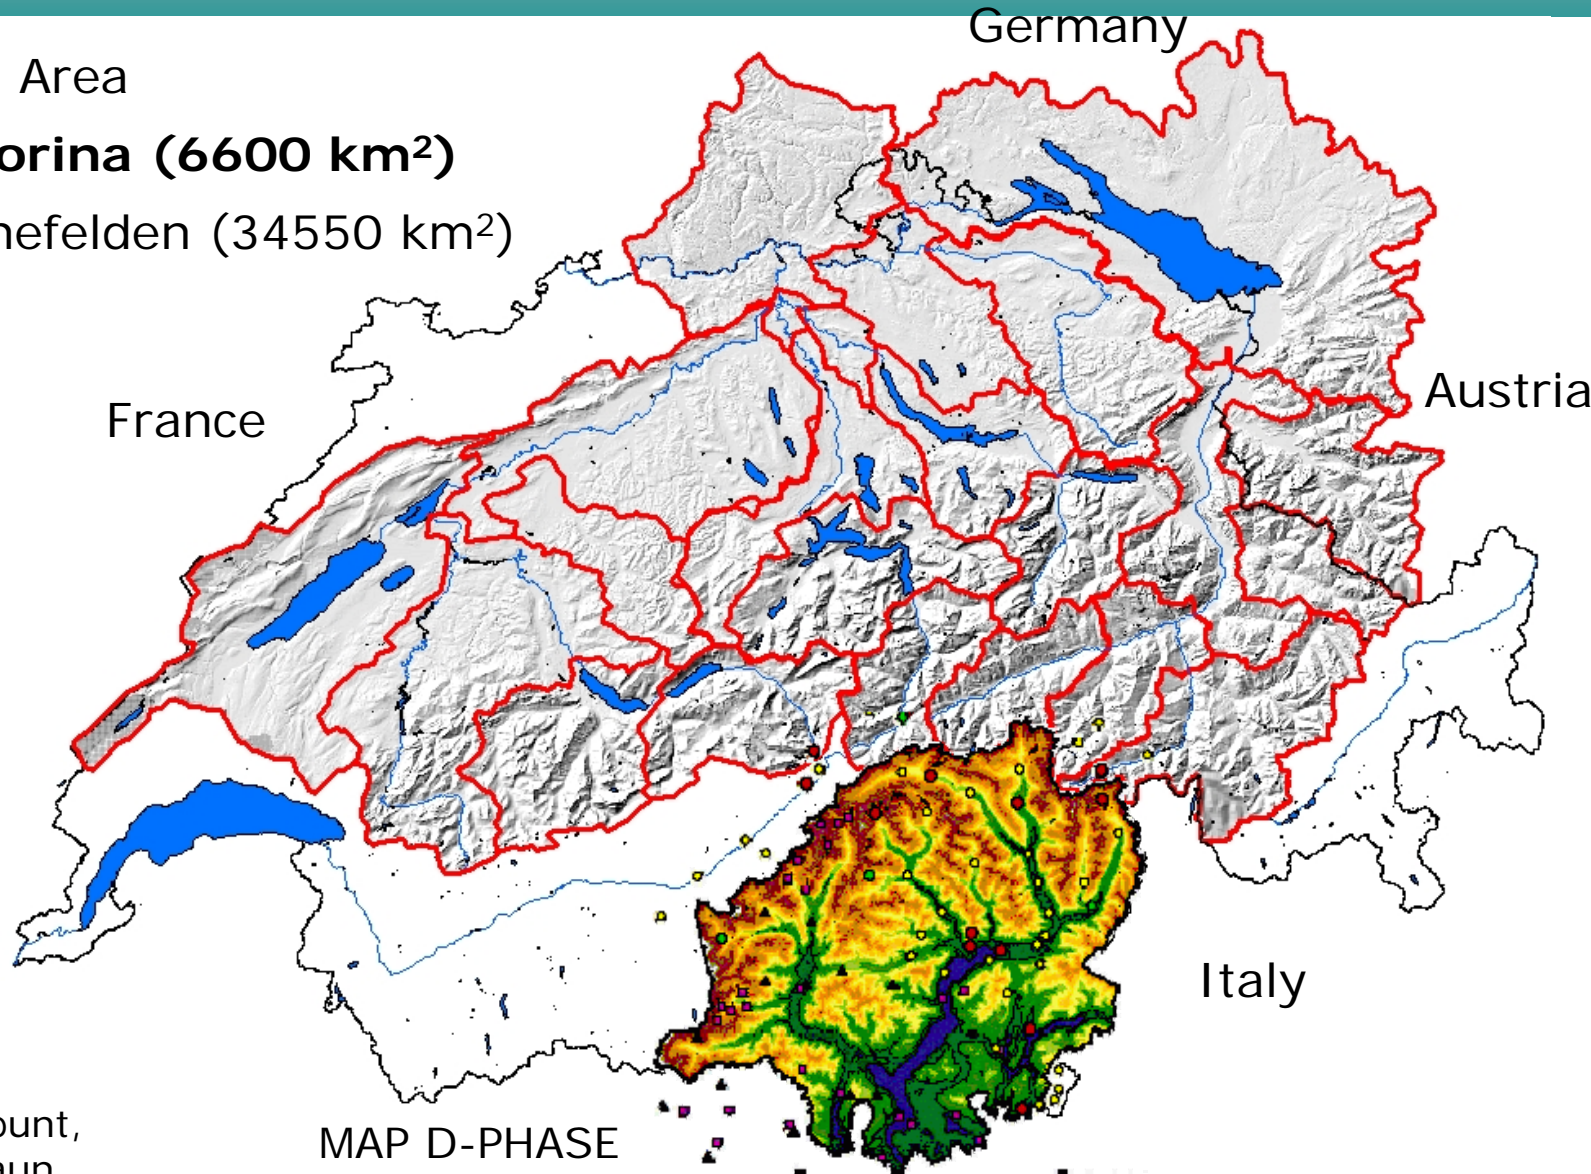

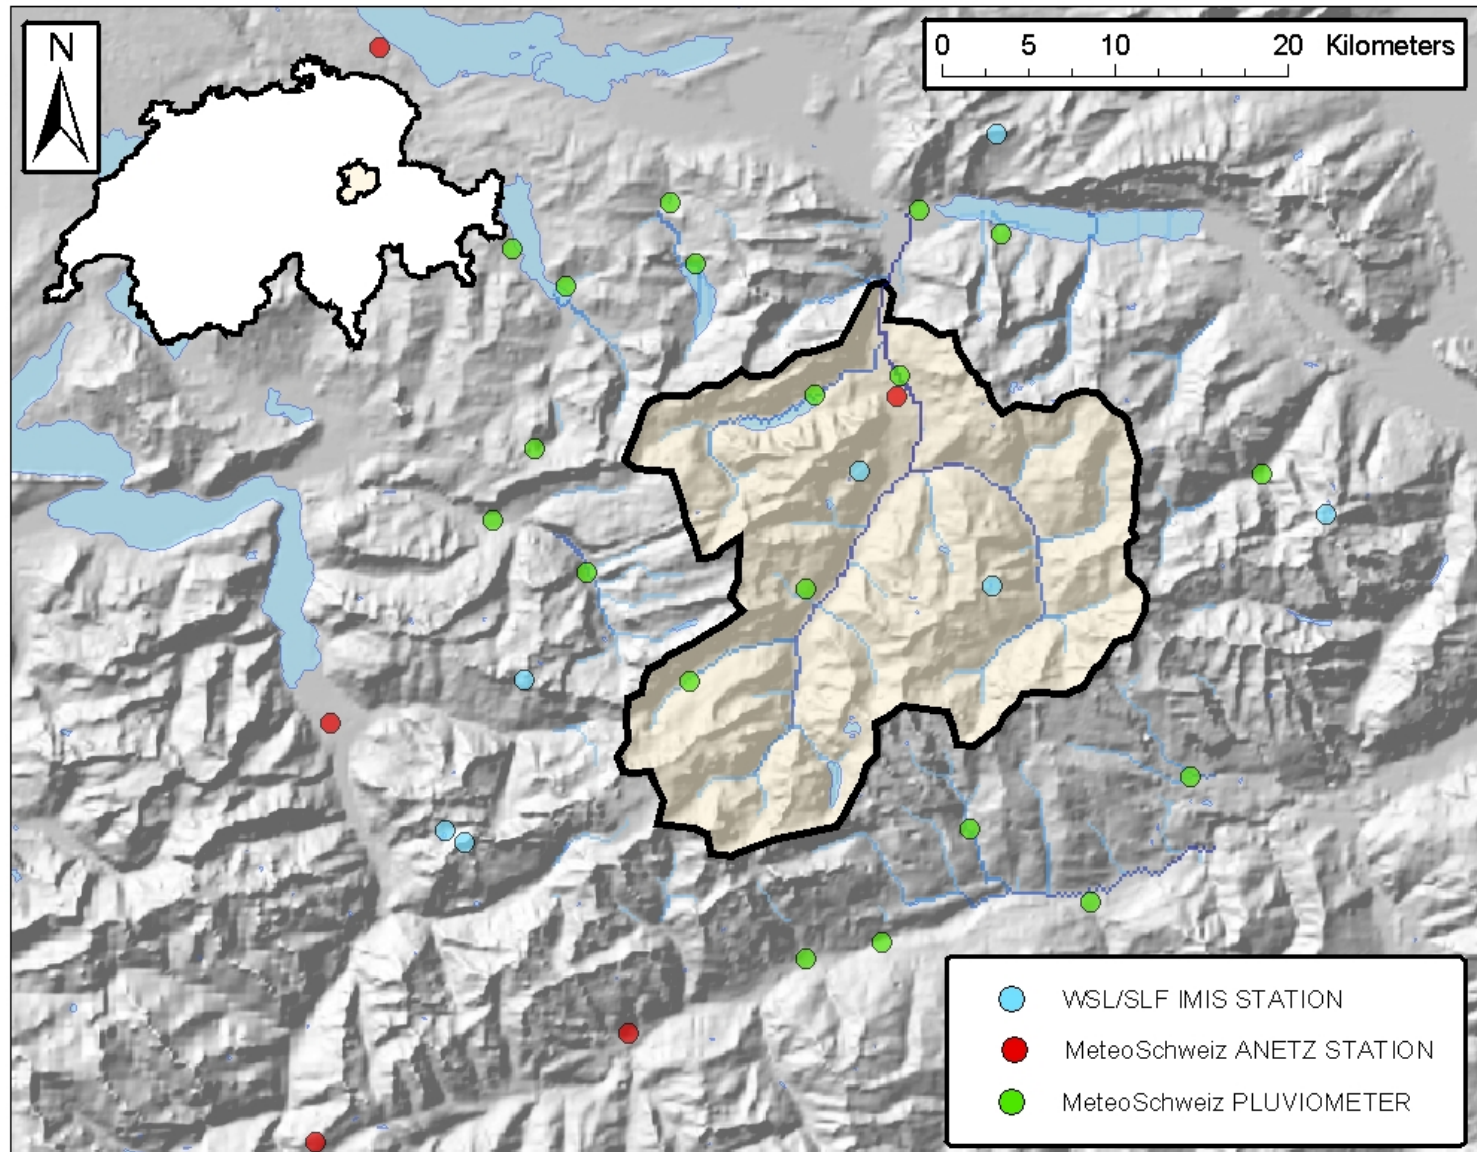

Figure: M. Verbunt,
K. Jasper, S. Jaun

MAP D-PHASE

PROFIT small test area Linth (600 km²) - EU Glarus

Summary

- MAP D-PHASE
 - > high resolution probabilistic and deterministic flood forecasting in the Alps
- COST 731
 - > uncertainty propagation in meteo-hydrological forecasting
- Both
 - > ongoing projects
 - > one-to-one 'application' of today's workshop theme

Thank you

Lago Maggiore - Lake Level after 1999 SOP

Uncertainty

- Precipitation as most difficult parameter to forecast, observe and interpolate
- operational use of use ensemble prediction systems (EPS) to assess the uncertainty involved in forecasting precipitation in time and space
- Propagation of uncertainty / Atmosphere <-> Hydrosphere
- Hydrological models calibrated for "average" flood
- Uncertainty in case of extreme events
- quantification of uncertainty within hydrological model systems
 - > Previous talk by M. Verbunt + Poster by S. Jaun, both IACETH.
